PROFESSIONAL SUMMARY

Full-Stack AI Engineer with 1+ year of professional experience building high-performance, multi-tenant SaaS platforms and intelligent, AI-driven web applications. Skilled in the Next.js, React, and Node.js ecosystems, with hands-on expertise integrating LLM APIs, RAG pipelines, and FastAPI microservices into production workflows. Proven ability to design scalable RESTful APIs, optimize relational and NoSQL database performance, implement secure authentication, and deliver clean, reusable UI systems. Adept at translating product requirements into shippable features across the full stack — from database schema to deployment.

TECHNICAL SKILLS

Frontend: React.js, Next.js (App Router, Server Components), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, SCSS, Responsive UI Design

Backend: Node.js, Express.js, FastAPI, RESTful APIs, MVC Architecture, Microservices, JWT Authentication, Role-Based Access Control, Server-Sent Events

AI & Automation: Python, LLM API Integration (OpenAI), Prompt Engineering, Retrieval-Augmented Generation (RAG), Vector Databases, LangGraph, n8n Workflow Automation

Databases: MySQL, MongoDB (Atlas), Sequelize ORM, Mongoose, Schema Design, Query Optimization

DevOps & Tools: Git, GitHub, Postman, CI/CD Pipelines, Render Deployment, Cloudinary, Multer, Better Auth, Node-Cache

Architecture: Multi-Tenant SaaS, Microservices, Component-Driven Development, State Management, Performance Optimization

PROFESSIONAL EXPERIENCE

Junior Software Engineer — Acqodis Technologies LLP

March 2025 – March 2026

Full-Stack Developer | React.js, Node.js, Express.js, Sequelize, MySQL

Kerala, India

- Engineered full-stack features for Clique, a multi-tenant SaaS platform, contributing across React.js, Node.js, Express.js, Sequelize, and MySQL to ship production modules for Roles, Designations, Departments, Users, Organizations, Subscription Plans, App Configuration, and Profile Management.
- Designed and maintained scalable RESTful APIs following MVC architecture, enforcing tenant-based data isolation through tenant-specific identifiers to ensure secure multi-tenant data separation.
- Implemented JWT-based authentication, protected routes, session handling, and role-based access control (RBAC), strengthening platform security across all user roles.
- Modeled relational schemas and complex Sequelize associations to support tenant-aware queries, improving data integrity and reducing query complexity across core modules.
- Built a reusable React component library — modals, filters, forms, pagination, tooltips, and tab-based profile/account pages — with responsive SCSS styling, accelerating feature delivery for subsequent modules.
- Developed advanced filtering systems with React hooks supporting server-side pagination, dynamic dropdowns, multi-select deletion, date range filtering, and reusable validation workflows.
- Optimized application performance by integrating Node-Cache with targeted cache invalidation strategies for frequently accessed modules, reducing redundant database load.
- Built secure file upload and profile image handling using Multer middleware with custom validation and dynamic storage configuration.
- Delivered subscription and business plan management workflows, including active plan rendering and seamless upgrade flows.

- Integrated UX libraries including React DatePicker and Tippy.js to improve interaction consistency and end-user experience.
- Resolved production defects spanning state synchronization, modal overlay rendering, authentication edge cases, and UI bugs, while continuously refactoring toward scalable, maintainable architecture.

PROJECTS

Job Application Tracker — Next.js, FastAPI, MongoDB, OpenAI, Better Auth

Personal Project

- Built a full-stack job-search management app featuring a drag-and-drop Kanban board (Applied, Interview, Rejected) for tracking application pipelines with inline editing and bulk column deletion.
- Engineered an AI-powered Job Importer that ingests URLs, pasted text, or screenshots and uses OpenAI to extract structured fields (company, position, location, salary, skills, tags), auto-populating application forms.
- Developed a Resume Examiner leveraging a Retrieval-Augmented Generation (RAG) pipeline to score resumes against job descriptions, returning ATS scores, skill match breakdowns (matched / missing / bonus), section-by-section analysis, and a recruiter-perspective summary.
- Architected AI functionality as an isolated FastAPI microservice (services/ai-parser) proxied through Next.js API routes, keeping OpenAI credentials server-side and gated behind authentication.
- Implemented user authentication with Better Auth and persisted job data in MongoDB Atlas with full CRUD operations.
- Stack: Next.js, React, MongoDB Atlas, FastAPI (Python), OpenAI API, Better Auth, RAG.

AI-Powered Blog Platform — MERN Stack, OpenAI, Cloudinary, Server-Sent Events

Personal Project

- Built a full-stack MERN blog platform (MongoDB, Express, React, Node.js) supporting user registration, rich-text post authoring, image uploads via Cloudinary, and category-based content organization.
- Integrated AI-powered title and category suggestions that analyze post excerpts in real time and recommend 3–4 fitting titles plus the optimal category to improve author productivity.
- Implemented real-time AI summarization with streaming TL;DR cards for posts exceeding 300 words, delivered via Server-Sent Events (SSE) for word-by-word client rendering.
- Developed an AI tone analysis feature returning tone, sentiment, writing style, target audience, and actionable writing tips before publication.
- Abstracted all AI features behind a dedicated /api/ai service layer, cleanly decoupling AI integration from the core blog logic.
- Stack: MongoDB, Express.js, React, Node.js, OpenAI API, Cloudinary, Server-Sent Events.

CERTIFICATIONS

- LLM Engineering, RAG, & AI Agents Masterclass — 2026
- System Design Masterclass: From FAANG Insiders — 2026

EDUCATION

Master of Computer Applications (MCA) — APJ Abdul Kalam Technological University
CGPA: 7.2 / 10

2022 – 2024
Kerala, India

Bachelor of Computer Applications (BCA) — Calicut University

2019 – 2022
Kerala, India
